

ULTRASHOT[®] DRONE

Making exothermic connections just got even easier with Harger's new hand held DRONE. Utilizing a Milwaukee[®] M18[™] REDLITHIUM[™] XC 4.0 18 volt battery featuring a built-in fuel gauge, the DRONE makes over 1,300 connections on a single charge! The UltraBright LED indicates instantaneous ignition. Borrowing from our previous model, the dual trigger ignition design adds an additional safety measure - no accidental bumping or misfires. Also includes a 6' cord featuring a quick latch disconnect which allows for easy storage. DRONE - Safe, Lightweight, Hand Held, Instantaneous Exothermic Connections, Extended Battery Life!

DRONE ignites UltraShot[®] copper drop-in weld metal cartridges that are consumed in the exothermic connection.
